```
public class Homework {
    public static void main(String[] args) {
        // If it matches my sample exactly it gets a 0
        // 1. Create a variable that holds a name
        String name = "Mike";

        // 2. Output the name to the console
        System.out.println(name);

        // 3. Create a variable that holds an age (as a whole number)
        int age = 22;

        // 4. Output the age to the console
        System.out.println(age);

        // 5. Create a variable that holds a decimal
        double dec = 3.141592638579;

        // 6. Output the variable
        System.out.println(dec);
    }
}
```
